DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-34 are rejected under 35 U.S.C. 102(e) as being anticipated by Robbins et al. (2004/0072593)

The applied reference has a common inventor with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

((b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Aho et al. (6,198,941).

Regarding claims 1, 33-34, Aho discloses a method of operating a portable communication device comprising: initiating a call from the WLAN switch to a subscriber device via the wireless communication system (see fig.1, elements 101, 170, 171, col.1,

lines 16-34 and its description; receiving the call from the wireless communication system (see fig.1, elements 101, 170, col.1, lines 24-34 and its description); switching the call from the wireless local area network to the connection to the wireless communication system (see abstract, fig.1, elements 101, 170, 171, col.1, lines 24-26 and its description).

Regarding claims 2-6, 18-22, Aho further discloses sending, receiving, a r message to/from the WLAN switch/ a cellular system (see abstract, fig.1, elements 101, 170, 171, col.1, lines 16-26 and its description).

Regarding claims 7-11, 23-27, Aho further discloses determine whether a handoff to the wireless communication is warranted, the handoff determination is made through monitoring a wireless local area network signal strength parameter, the wireless local area network signal strength parameter is an automatic gain control value, the wireless local area network signal strength parameter is receive signal strength indication (see abstract, figs.1-2, elements 101, 170, 171, and its description).

Regarding claims 12-16, 28-32, Aho further discloses all subject matters in claimed (see fig.3 and its description).

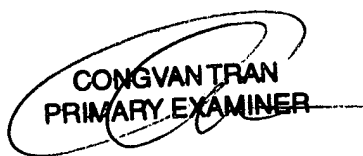

Regarding claims 17, Aho discloses a method of operating a portable communication device comprising: a SIP processor to initiate a call from the WLAN switch to a subscriber device via the wireless communication system (see fig.1, elements 101, 110, 170, 171, col.1, lines 16-34 and its description); a cellular processor to receive the call from the wireless communication system (see fig.1, elements 101, 110, 140, 170, col.1, lines 16-34 and its description); a controller to switch the call from

the wireless local area network to the connection to the wireless communication system (see fig.1, element 144, col.1, lines 16-34 and its description).
